

HOW TO PREPARE YOUR VEHICLE FOR SHIPPING

Follow these recommendations to get your running (not inoperable) car ready for transport. Review our [terms and conditions](#) for more details.

MAINTENANCE CHECK

Your vehicle must be fully operational and able to roll, brake and steer under its own power.

HAVE KEYS READY

The truck driver will need keys to drive your vehicle on and off the truck.

WASH YOUR CAR

Just a quick bath—no detailing needed! It's easier for you and the trucker to inspect your car for any scratches, dents, etc. You'll sign the Bill of Lading (BOL) with this inspection at pickup and delivery.

GAS TANK

Make sure your gas tank is about $\frac{1}{4}$ full. A full tank adds weight to your vehicle and the car carrier. We prefer that electric vehicles have a fully charged battery and charging cables.

EXTERIOR PARTS

Retract or remove your antenna and place it in your truck, remove your bike rack and any loose parts.

REMOVE VALUABLES

To ensure your valuable items stay safe, remove vehicle add-ons such as custom stereos, GPS systems, etc.

PERSONAL ITEMS

You're allowed one piece of luggage (suitcase, box, duffel bag) up to 100 pounds in the trunk or storage area (below window level) during transport.

PARKING PASSES/TOLL TAGS

Remove them to avoid fees as your car passes through tolls. You'll be responsible for resolving any fees incurred during transport.
